

Data Structure and Algorithm, Spring 2026

Final Exam: Feedback Part

Due: 13:00:00, Wednesday, June 3, 2026

TA E-mail: dsa_ta@csie.ntu.edu.tw

Rules and Instructions

- Any form of cheating, lying, or plagiarism will not be tolerated. Students can get zero scores and/or fail the class and/or be kicked out of school and/or receive other punishments for those kinds of misconducts.
- Since everyone needs to write the final solutions alone, there is **absolutely no need to lend your homework solutions and/or source codes to your classmates at any time**. In order to maximize the level of fairness in this class, lending and borrowing homework solutions are both regarded as dishonest behaviors and will be punished according to the honesty policy.
- You should combine your answers in one PDF file. **This feedback must be submitted as a separate PDF file, not combined with your HW4 submission. It will be hosted under a different Gradescope assignment item, so please submit the separate PDF to that item.** Your file should generally be legible with a white/light background — using white/light text on a dark/black background is prohibited.
- The PDF file for this homework, should be submitted to Gradescope as instructed, and you should use Gradescope to tag the pages that correspond to each subproblem to facilitate the TAs' grading. Failure to tag the correct pages of the problems can cost you a 20% penalty.
- Your feedback will be counted as part of your **final exam score**. Each sub-question will be graded individually. For each sub-question, in principle, write around **5 lines of constructive and substantial feedback**. This can be either positive or negative, as long as it reflects genuine thought and directly addresses the aspect. You may also confirm the effectiveness (or ineffectiveness) of specific course arrangements. Each question is worth **1 point**, divided as follows:
 - **0.8 points (80%)**: Awarded if the response meets the basic criteria above.
 - **0.2 points (20%)**: Based on the thoughtfulness and applicability of your feedback.
- This homework would account for 5% of your **final exam score**. **No late submissions are allowed** for this homework, so please make sure to complete and submit it on time.

Feedback (5 pts in the final exam)

In previous years, we had the tradition of asking for feedback in the final exam. Some students said they could not write down extensive feedback during the exam due to the time constraint.

Last year, we moved the feedback section to Homework 4, and it turned out to be a great improvement. This year, we decide to do the same — you can complete the feedback at home before the exam, just like a regular homework task.

However, your feedback will be graded and counted as part of your final exam score.

As we strive to continuously improve our course over the years, we highly value your feedback. We would appreciate if you could take a few moments to share your thoughts on the following aspects of our course.

1. (1 point) **Homework Assignments:** Please comment on your experience with both the handwritten and programming parts of the assignments (including the mini-HW). What aspects do you find beneficial, and what improvements would you suggest?
2. (1 point) **DSA Judge:** This year we built a brand new DSA Judge for our students and we would love to know what our first group of users think of it! What is your overall user experience? Did the experimental testcase generation feature help you debug your code? If you have used the old DSA Judge before, what improvements does the new judge offer over the old one?
3. (1 point) **Class Activities:** How do you like the experience of our three class activities: software engineering activity, earth game, and Kahoot game? Are there specific activities you find most engaging or beneficial? What improvements would you suggest?
4. (1 point) **Teaching Assistants (TAs):** We would love to hear about your interactions with the TAs, both during TA hours and through online channels (email and Slido). How helpful have you found their support, and what could be improved in your interactions with them?
5. (1 point) **Lectures:** Given that we have both in-person and video lectures (from the second half of the semester), and two instructors, your insights on each teaching format and instructor's approach would be invaluable. What teaching methods, elements, and subjects do you appreciate the most, and what suggestions do you have for enhancement?

Your candid feedback is crucial for us to refine our approach and make this course as effective and enjoyable as possible. Thank you for taking the time to help us enhance your learning experience!
